

Evolution of RDC continues with the Introduction of Integrated Remote Lockbox

The success of Remote Deposit Capture over the past few years has been tremendous for both financial institutions and corporate practitioners alike. Lowering deposit clearing costs, expediting funds availability and overall ease of use has jump started the “deposit anywhere” movement, and expectations continue to grow. Banks require added risk mitigation tools, corporations want more robust functionality and hardware device prices are becoming more competitive. Now is the time for the software that drives “deposit anywhere” products to evolve to provide more efficiencies, added functionality, unified reporting and better transparency.

For almost two decades, ImageScan Inc. has delivered complex transaction processing solutions, in a quick-time-to-market fashion, serving industries across the business spectrum—they’ve just added another one.

Sometimes RDC just isn't enough!

RemitTrac’s Integrated Remote Lockbox module, incorporates, the fundamentals of traditional remote deposit capture products and adds the feature rich functionality, with tighter compliance controls the market place has been striving for.

Deposit checks with ease, Capture documents such as invoices, remittance stubs, bills of lading, application forms, tax records or any other business critical documents effortlessly. Seamlessly integrate these client captured items into your existing lockbox workflow for deposit and other value added processing, enabling a single unified view of all lockbox work on the day of receipt, regardless who receives the mail, the bank or the corporate client.
